

Technical Soil Descriptions

This subsection provides information about soil series. There is a link provided, **Official Soil Series Description** that can be used to obtain technical information about soil characteristics and the material in which the soil formed are identified for each series. The soil is compared with similar soils and with nearby soils of other soil series. A pedon, a small three-dimensional area of soil that is typical of the series is described. The detailed description of each soil horizon follows standards in the soil survey manual. Many of the technical terms used in the descriptions are defined in Soil Taxonomy. Following the pedon description is the range of important characteristics of the soil series.

This subsection also has a taxonomic classification report of the soil series that reflects the soil classification of the soil series at the final correlation. To generate a taxonomic classification report, click on the link **Taxonomic Classification of the Soils**
